

MODULE <i>OpAWSet</i>	
CONSTANTS	
<i>Data</i>	the set of data
VARIABLES	
<i>set</i> ,	<i>sSet</i> [<i>r</i>]: set of active <i>Element</i> (<i>s</i>) maintained by $r \in \text{Replica}$
<i>abuf</i> ,	<i>abuf</i> [<i>r</i>]: buffer of <i>Element</i> (<i>s</i>) added maintained by $r \in \text{Replica}$
<i>rbuf</i>	<i>rbuf</i> [<i>r</i>]: buffer of <i>Element</i> (<i>s</i>) removed maintained by $r \in \text{Replica}$
<i>Element</i> \triangleq [<i>d</i> : <i>Data</i> , <i>r</i> : <i>Replica</i> , <i>k</i> : <i>Nat</i>]	the set of elements
<i>Network</i> \triangleq INSTANCE <i>ReliableCausalNetwork</i>	instance a reliable causal network
<i>TypeOK</i> \triangleq	
\wedge <i>set</i> \in [<i>Replica</i> \rightarrow SUBSET <i>Element</i>]	
\wedge <i>abuf</i> \in [<i>Replica</i> \rightarrow SUBSET <i>Element</i>]	
\wedge <i>rbuf</i> \in [<i>Replica</i> \rightarrow SUBSET <i>Element</i>]	
<i>Init</i> \triangleq ...	initial state
<i>Send</i> (<i>r</i>) \triangleq ...	$r \in \text{Replica}$ send a message
<i>Receive</i> (<i>r</i>) \triangleq ...	$r \in \text{Replica}$ receive a message
<i>Add</i> (<i>d</i> , <i>r</i>) \triangleq ...	$r \in \text{Replica}$ add $d \in \text{Data}$
<i>Remove</i> (<i>d</i> , <i>r</i>) \triangleq ...	$r \in \text{Replica}$ remove $d \in \text{Data}$
<i>Do</i> (<i>r</i>) \triangleq	operations
$\exists d \in \text{Data} : \text{Add}(d, r) \vee \text{Remove}(d, r)$	
<i>Next</i> \triangleq	next-state relation
$\exists r \in \text{Replica} : \text{Receive}(r) \vee \text{Send}(r) \vee \text{Do}(r)$	
<i>Spec</i> \triangleq <i>Init</i> \wedge $\square[\text{Next}]_{\text{vars}}$	specification
